I. EARNED DEGREES

Ph.D. Meteorology	1990	Massachusetts Institute of Technology
B.S. Meteorology	1984	McGill University

II. EMPLOYMENT HISTORY

Associate Professor	Georgia Tech	2002-present
Senior Research Scientist	Georgia Tech	1999-2002
“Adjunct Star” EAS Faculty Appointment	Georgia Tech	1994-2002
Research Scientist II	Georgia Tech	1993-1999
Senior Research Associate	AER, Inc.	1991-1993
Postdoctoral Research Associate	MIT	1990-1991
Graduate Research Assistant	MIT	1984-1990

III. HONORS, AWARDS AND RECOGNITIONS

2016 National Champion, WxChallenge Collegiate Weather Forecasting Competition.
2013 6th Place (Overall), 2nd Place among faculty, WxChallenge Competition.
2012 7th Place (Overall), 3rd Place among faculty, WxChallenge Competition.
2009 10th Place (Overall), WxChallenge Collegiate Weather Forecasting Competition.
2008 National Champion, WxChallenge Collegiate Weather Forecasting Competition.
2002 Top Ten journal article of American Meteorological Society
1998 Sigma Xi Young Faculty Award, Georgia Institute of Technology.
1987 Victor P. Starr Prize, Massachusetts Institute of Technology.
1984 Howard H. Hanks Jr. Scholarship, American Meteorological Society.
1984 University Scholar with Great Distinction, McGill University.
1983 GISS/Lamont-Doherty Summer Fellowship.

F. SOCIETAL AND POLICY IMPACTS

Most of my scholarship involves the physical understanding, simulation and prediction of large-scale atmospheric phenomena impacting regional weather and climate. As such, the research results provide an improved understanding of (a) how weather and climate processes operate, (b) how well modern weather and climate models are able to represent such processes and (c) how such processes may change in the future. This information has important bearing upon both weather prediction and climate modeling, both of which have critical societal impacts.

C. OTHER TEACHING ACTIVITIES

I developed the course “Large-Scale Atmospheric Circulations” which is now taught every other spring term. The course provides an introduction to the phenomenology and dynamics of large-scale atmospheric variations having time scales of a week and longer. Using papers from the recent scientific literature and real-time analyses, the basic characteristics, underlying physics, and current status of a number of large-scale atmospheric phenomena are overviewed. Topics include weather regimes, storm track variability, stratospheric polar vortex variability, El Niño-Southern Oscillation, teleconnections, monsoon circulations, the Arctic Oscillation, the Madden-Julian Oscillation and stratosphere-troposphere coupling. The class format includes reading assignments, student presentations and peer review.
